Information Systems Analysis and Development
SENA

2018
Software Programming Technician
SENA

Skills

- Cloud computing
- Project Management / Atlassian
- BPM / Process Flows
- Development Frontend / Backend
- Teamwork
- Problem solving
- Communication / Adaptability
- Scrum / Kanban
- UI/UX
- Requirements analysis
- Database Management
- JavaScript / Angular / React
- Java / Springboot
- PHP / Laravel
- AWS / Azure / GCP
- MySQL / PostgreSQL / SQLServer

I am passionate about software development with a strong ability to transform concepts into tangible solutions. My approach is based on the creation of clean and efficient code, as well as effective collaboration in multidisciplinary teams. With experience in different programming languages, databases, organization of work teams and knowledge in all phases of the life cycle of a project, with a constant commitment to improvement, I aspire to continue leading innovative projects and contribute to the success of development teams.

Experience

Freelancer | Bogotá D.C
Since january 2024

Freelance software analyst and developer

I have developed modern websites using Angular creating intuitive and functional interfaces that enhance user experiences. I've also contributed to machine learning and data analytics projects, integrating predictive models and dashboards to optimize decision-making. My solutions have helped clients digitize processes and gain key insights for growth.

- Custom Software Development: I implemented tailored technological solutions to meet client needs, developing modern websites using Angular, React, and Tailwind CSS to create intuitive and functional interfaces that enhance the user experience.
- Consulting on Agile Methodologies and Best Practices: I guided teams and clients in the application of agile methodologies (such as Scrum) to optimize workflow, improve collaboration, and ensure continuous value delivery. I ensured the use of best practices in software development, coding, testing, and deployment, promoting scalable and maintainable solutions.
- Project Structuring and Management: I provided consulting on project planning and structuring, defining clear stages, deliverables, and deadlines, while ensuring effective resource and time management to achieve the established goals.

Intevo S.A.S | Bogotá D.C
August 2021 - March 2023

Requirements Analyst

I had the opportunity to play different roles, such as technical project leader, staff trainer in the tools and languages used, front, back and fullstack developer. I learned and was able to apply a diverse set of skills that allowed me to excel in the work and professional context.

- Leadership and Project Management: Led multidisciplinary teams, ensuring the successful delivery of technological projects through efficient planning and the achievement of key objectives.
- Software Development: Implemented front-end, back-end, and full-stack solutions using technologies like Java, Spring Framework, React, Angular, and Node.js, along with mobile applications using Flutter and Kotlin.
- Data Analytics and Dashboards: Designed and implemented interactive dashboards and KPIs with Power BI, helping clients make data-driven decisions.
- Process Optimization and Database Design: Modeled processes and designed efficient database architectures with SQL Server, MySQL, and MongoDB, enhancing performance and scalability.
- Training and Documentation: Trained staff in tools and languages used, documented technical requirements, and conducted quality testing, ensuring adoption and excellence in developed solutions.
